

## Introduction

Holtek Semiconductor was established in 1983 and to the present day the company has released an unceasing stream of competitive semiconductor devices onto the global market. While the Holtek design teams continue to focus their development efforts in the 8-bit and 32-bit microcontroller development area, it would be easy to ignore the wide range of peripheral semiconductor products also present within Holtek's design sphere. Underpinning these successful product developments is of course the many years of semiconductor design experience accumulated by the company's professional engineering design teams. These efforts have resulted in providing Holtek customers with a wide range of high quality industrial grade semiconductor devices. Many of today's popular global brand consumer appliances and industrial products are major users of Holtek's devices, which in today's highly competitive semiconductor market illustrates their confidence in the company's products. Holtek remains fully committed to the continuous expansion of its high quality and superior price-performance semiconductor devices well into the future.

## Product Device Range

The Holtek product development focus will remain firmly in the microcontroller region for both 8-bit and Arm® core based 32-bit microcontrollers. Internal functions of these microcontrollers includes an extensive range of fully integrated digital and analog features such as A/D converters, comparators, LCD drivers, PWM generators, high current LED drivers, touch switches, SPI/I<sup>2</sup>C, UART and USB interfaces, voice functions, RF functions etc. Its 32-bit and 8-bit microcontroller devices meet with full industry specifications in having a wide voltage and temperature operating range. Complementing its microcontrollers are a wide range of peripheral devices such as stand alone touch switch ICs, LCD drivers, power management devices, video processors etc. The company is also expanding its range of functional modules such as PIR modules, infrared modules, temperature/humidity modules etc further expanding the diversity of the Holtek range and opening up the application areas into a wider market area.

## Product Development Strategy

In line with market trends and customer requirements, Holtek's commitment to new product development and innovation can be seen through its continuously expanding device functionality. As the Internet of Things – IOT – continues to reach into society's demands for an increasingly connected lifestyle, the Holtek multi-function product range stands well placed to embed itself into this fast expanding market area. The integration of features such as RF functions, voice, touch key and power management functions into its microcontroller range show this commitment to IOT product trends. Holtek's range of standard microcontroller products will continue to expand but along with it will be the design of application specific products such as those for motor control, personal health care, home appliances etc. With its long history of working together with customers to design their custom microcontrollers, Holtek welcomes product manufacturers to discuss possible new custom microcontroller design possibilities. Additionally and as no functionally rich microcontroller is useful without a suitable development platform, all of Holtek's products are fully supported by a comprehensive range of hardware and software development tools to simplify the designer's product development process. Holtek's obligation to ISO compliance and its string of innovation awards and intellectual properties provide further evidence of the company's commitment to product development excellence.

## Marketing Service Network

Holtek's range of semiconductor products is fully complemented by its extensive global marketing network with a sales presence in most parts of the world. Having an established large number of worldwide sales offices and agents, Holtek's global marketing structure is well placed to take advantage of any new market opportunities and trends as they arise.

## Selecting Your Holtek Device

As the range of both 8-bit and 32-bit microcontroller devices covers a vast range of types and functions, Holtek recommends that customers consult its on-line "Product Selector" to assist them in their selection of the best microcontroller for their specific application. With Holtek continually releasing new products onto the market, it should be noted that the website version, rather than the printed version of the selection guide, will contain the most up to date product information.

## 32-Bit MCU Programming Tools

Holtek is fully aware that the success of their microcontroller device range also depends upon the availability of high quality development tools. As a result, Holtek has developed a full suite of professional hardware and software tools to provide designers with an excellent set of development resources to ensure their application are designed and debugged as efficiently as possible.

In this section can be found details regarding which set of tools should be used for the HT32 series microcontrollers.

Model	Function	Support Hardware
HOPE3000F or 32Bits	e-Writer32 programmer software for HT32 series MCUs	e-WriterPro
HT32 Flash Programmer	In-System / In-Application programmer software for HT32 series MCUs	All series of HT32 Development Board or Starter Kit. ESK32-xxx, ESK32-xxxSK, ESK32-30xxx
HT32 Keil Support Package	Integrated Keil development environment software for HT32 series MCUs	
HT32 IAR Support Package	Integrated IAR development environment software for HT32 series MCUs	
HT32 Virtual COM Driver	HT32 USB Virtual COM Driver setup program	e-Link32 Pro. All series of HT32 Development Board or Starter Kit with USB Virtual COM example.

### e-Link32 Pro Debug Adapter

The e-Link32 Pro is a new generation debug adapter for Holtek's 32-bit microcontrollers allowing users to program and debug their programs on their target boards. By using the e-Link32 Pro together with the Keil µVision IDE or IAR EWARM IDE, users are provided with a suite of development tools for rapid MCU product development.

The e-Link32 Pro package includes the e-Link32 Pro debug adapter, flat cable and USB cable.

## 8-Bit MCU Programming Tools

Holtek is fully aware that success of their microcontroller device range also depends upon the availability of high quality development tools. As a result Holtek has developed a full suite of professional hardware and software tools to provide designers with an excellent set of development resources to ensure their applications are designed and debugged as efficiently as possible. In this section can be found details regarding which set of tools should be used for each microcontroller device.

## **HT-IDE3000 Development Environment**

The HT-IDE3000 is a fully integrated development system for the Holtek range of microcontrollers. Working in conjunction with the Holtek ICE hardware emulator, the HT-IDE3000 system provides a user friendly workbench to ensure the process of application program development and debug is as efficient and trouble free as possible. By combining all software tools, such as editor, cross assembler, linker, library manager, symbolic debuggers as well as hardware tools, application designers have all the tools required at their disposal to ensure rapid development and debug of their new designs. An HT-IDE3000 User's Guide is available for download from the Holtek website, which provides much more detailed information on the HT-IDE3000 development system.

The HT-IDE3000 development system software is available for free download from the Holtek website. To ensure that users are provided with the latest modifications and enhancements to the system and to support new device releases, Service Packs are regularly provided.

## **HT-ICE — Holtek In-Circuit Emulator**

The HT-ICEs are multi-featured hardware emulators to assist designers with the rapid development of their Holtek MCU applications. Their expansive integrated hardware and software features, provide designers with a full suite of tools for rapid and easy product development. At the heart of the system is the hardware emulator, which can fully emulate Holtek 8-bit MCU devices in real time as well as providing full debug and trace integrated functions. The HT-ICE package includes the hardware mainboard platform, CD, flat cables, power adapter, power cord and printer cable.

HT-ICE USB cable allowing customers to connect the HT-ICE LPT connector to the computer USB port. The part number of this USB cable is CUSBICECABLE4A. Please contact us for purchasing details.

## **e-ICE**

The e-ICE is Holtek's new generation of MCU in-circuit emulators that uses a real chip EV for device emulation. In this way a more accurate emulation of device function and characteristics can be implemented. Together with the HT-IDE3000 software development system the user is provided with a suite of development tools for rapid MCU product development.

## **Holtek New Universal Writer – e-WriterPro**

The e-WriterPro can be used not only as a programming tool for all of Holtek's OTP and Flash devices during the development stage but can also be used for small to medium volume production purposes.

The e-WriterPro must be used together with a corresponding e-Socket according to the package type of the MCU that is to be programmed. Devices with the same package type require only a single e-Socket, thus reducing the problem of changing different adaptors for different IC part numbers.

For all available Holtek devices, the following e-Socket table shows which one should be used with which device package type.

<b>e-Socket</b>

Note: 1. Data in parentheses next to each package type shows the actual width of the IC package.

2. ESKxxxxxC is completely compatible with ESKxxxxxA.

### 8-Bit MCU Tools Indexing Table

The following table allows the correct tools to be quickly located against a device part number. In instances where tools are not listed for specific devices, this may infer that such tools are not required. Note that the "HT-ICE(S)" ICE type stands for the HT-ICE set and the corresponding I/O card.
