

QUAD SINGLE-SUPPLY OPERATIONAL AMPLIFIER

■ GENERAL DESCRIPTION

The NJM2902C / NJM2902CA consists of four independent, high gain, internally frequency compensated operation amplifiers, which were designed specifically to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage.

Application areas include transducer amplifiers, DC gain blocks, and all the conventional op amp circuits, which now can be more easily implemented in single power supply systems. For example, the NJM2902C / NJM2902CA can be directly operated off of the standard +5V power supply voltage, which is used in digital systems and will easily provide the required interface electronics without requiring the additional ±15V power supplies.

■ FEATURES

- Single Supply
 - Operating Voltage +3V to +32V
 - Low Operating Current 1.2mA typ.
 - Slew Rate 0.6V/µs typ.
 - Bipolar Technology
 - Package Outline SOP14,SSOP14
 - Internal ESD protection Human body model (HBM) ±2000V typ.
 - Wide temperature range -40°C to +125°C
 - Input Offset Voltage Grade
- | | |
|------------------------|--------------------|
| NJM2902C(Normal-Grade) | NJM2902CA(A-Grade) |
| 7mV max. | 2.5mV max. |

■ EQUIVALENT CIRCUIT (1/4 Shown)

NJM2902C / NJM2902CA

■ ABSOLUTE MAXIMUM RATINGS

(Ta=25°C)

PARAMETER	SYMBOL	RATINGS	UNIT
Supply Voltage	V ⁺ - V	+32	V
Differential Input Voltage (Note1)	V _{ID}	±32	V
Input Voltage (Note2)	V _{IN}	V - 0.3 to V + 32	V
Output Terminal Input Voltage	V _O	V - 0.3 to V ⁺ + 0.3	V
Power Dissipation	P _D	SOP : 880 (Note3) 1200 (Note4) SSOP : 510 (Note3) 640 (Note4)	mW
Operating Temperature Range	T _{opr}	-40 to +125	°C
Storage Temperature Range	T _{stg}	-65 to +150	°C

(Note1) Differential voltage is the voltage difference between +INPUT and -INPUT

(Note2) Input voltage is the voltage should be allowed to apply to the input terminal independent of the magnitude of V⁺.

The normal operation will establish when any input is within the Common Mode Input Voltage Range of electrical characteristics.

(Note3) EIA/JEDEC STANDARD Test board (76.2 x 114.3 x 1.6mm, 2layers, FR-4) mounting

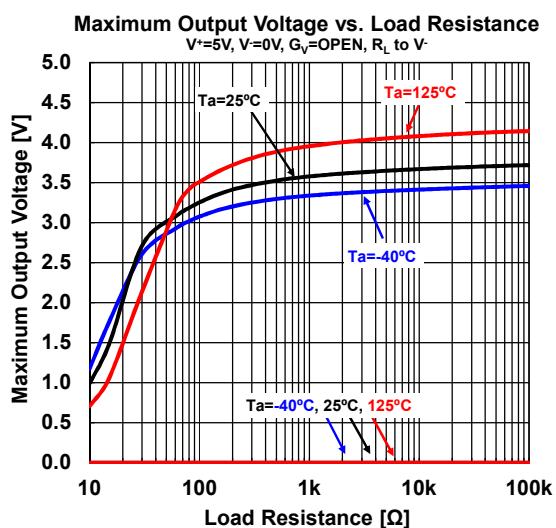

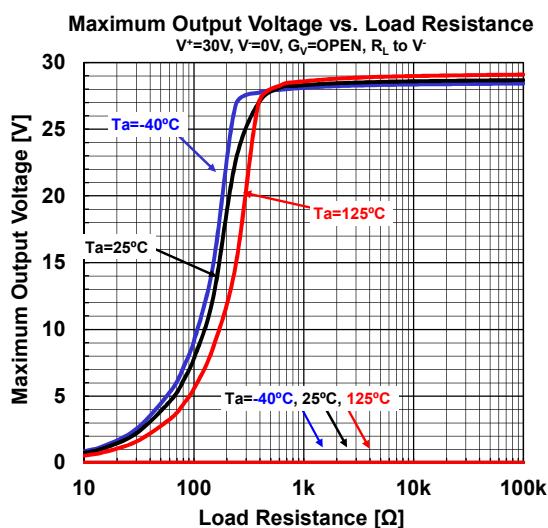

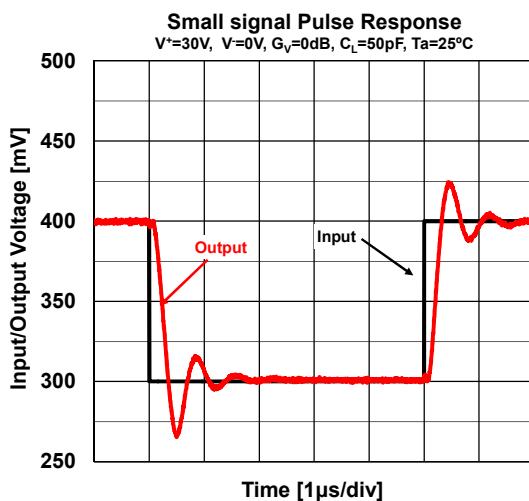

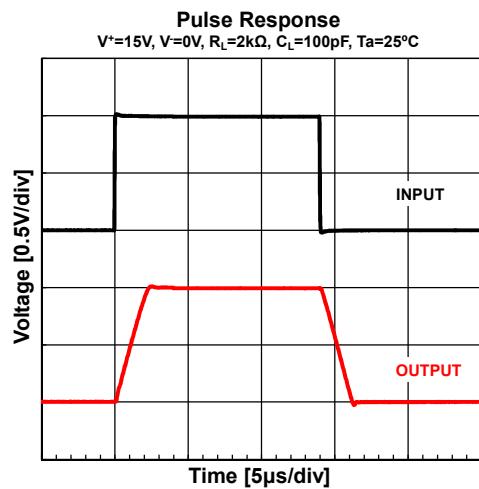

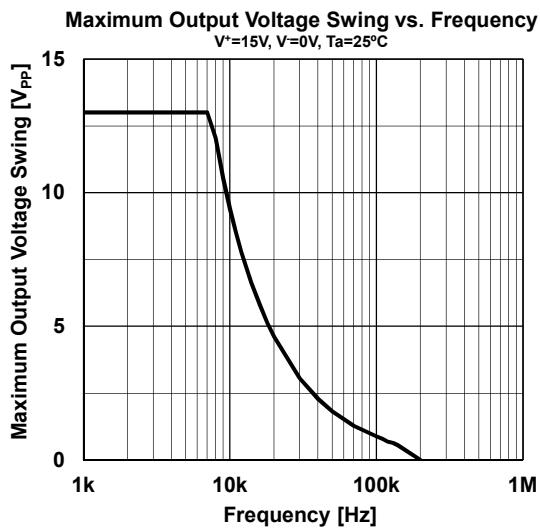

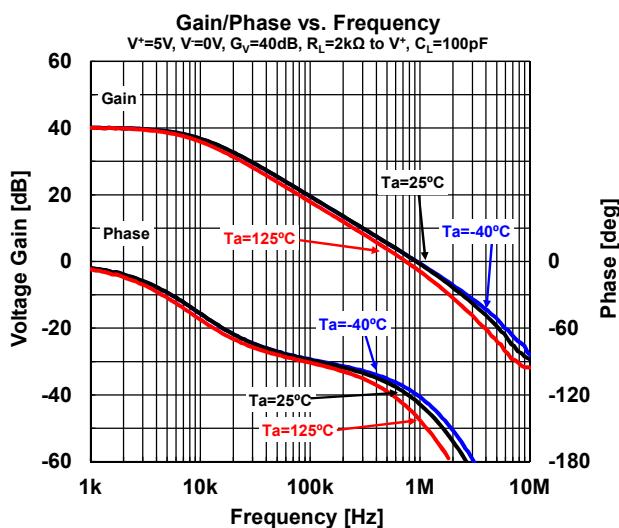

(Note4) EIA/JEDEC STANDARD Test board (76.2 x 114.3 x 1.6mm, 4layers, FR-4) mounting

■ ELECTRICAL CHARACTERISTICS

((V⁺=5V, V =0V, Ta=25°C, unless otherwise noted.)

PARAMETER	SYMBOL	TEST CONDITION	MIN.	TYP.	MAX.	UNIT
Supply Current (All amplifiers)	I _{SUPPLY}	V ⁺ =5V, no signal V ⁺ =30V, no signal	- -	1.2 -	2 3	mA

Channel Separation	CS	1kHz< f <10kHz	-	120	-	dB

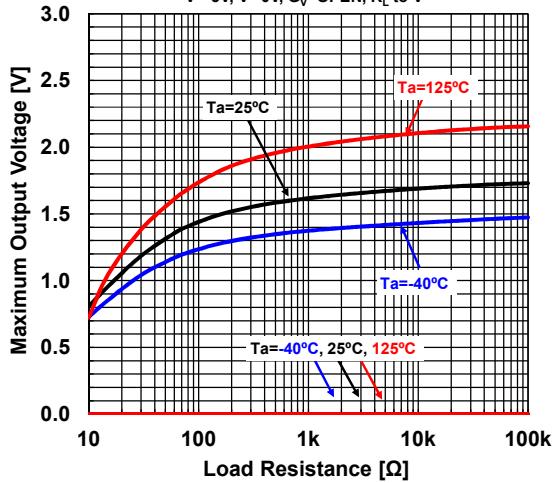

■ TYPICAL CHARACTERISTICS

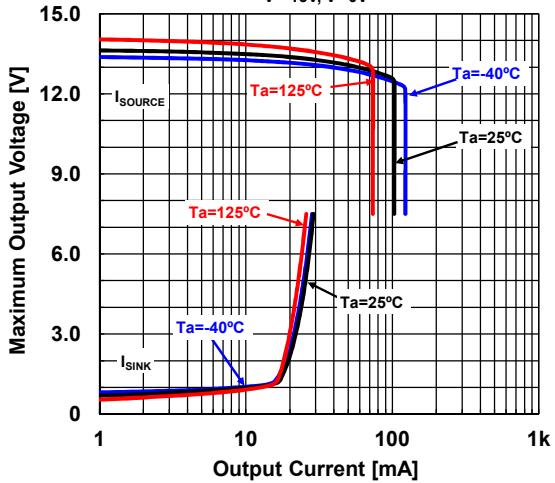

NJM2902C / NJM2902CA

■ TYPICAL CHARACTERISTICS

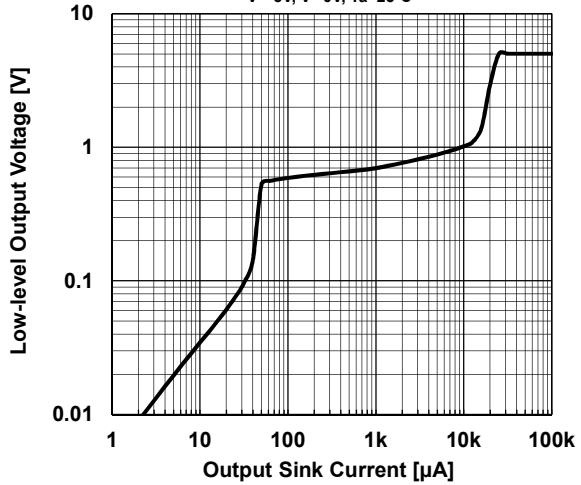

Maximum Output Voltage vs. Load Resistance
 $V^*=3V$, $V=0V$, $G_V=OPEN$, R_L to V^-

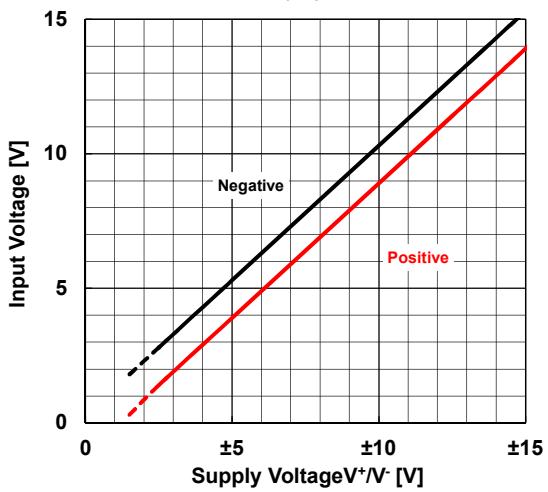

Maximum Output Voltage vs. Output Current
 $V^*=15V$, $V=0V$

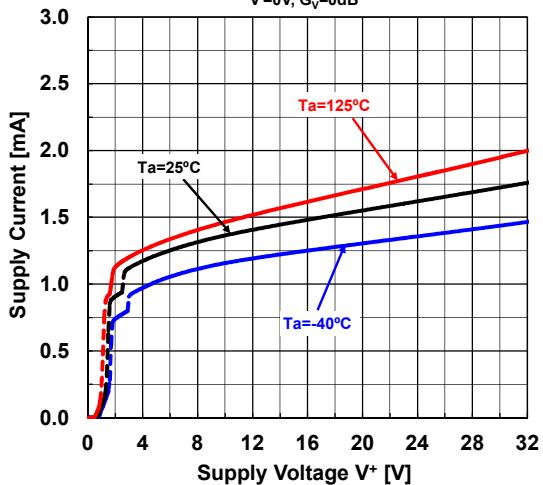

Low-level Output Voltage vs. Output Sink Current
 $V^*=5V$, $V=0V$, $T_a=25^\circ C$

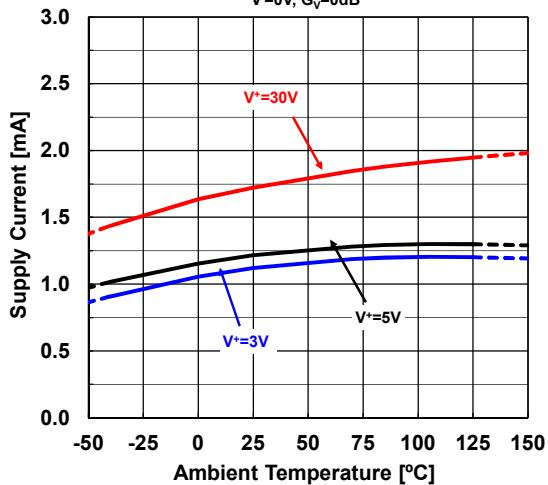

Input Voltage Range vs. Supply Voltage
 $T_a=25^\circ C$

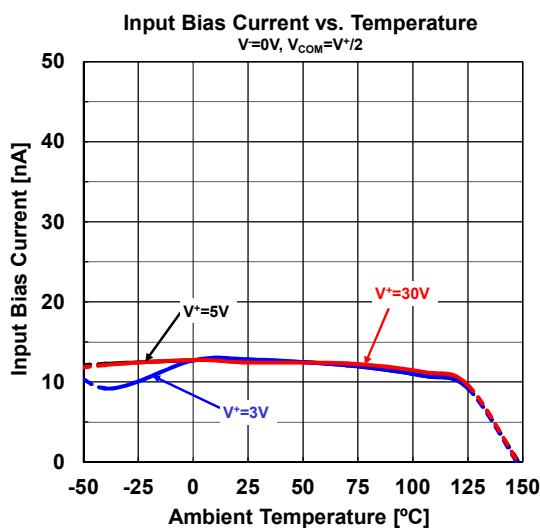

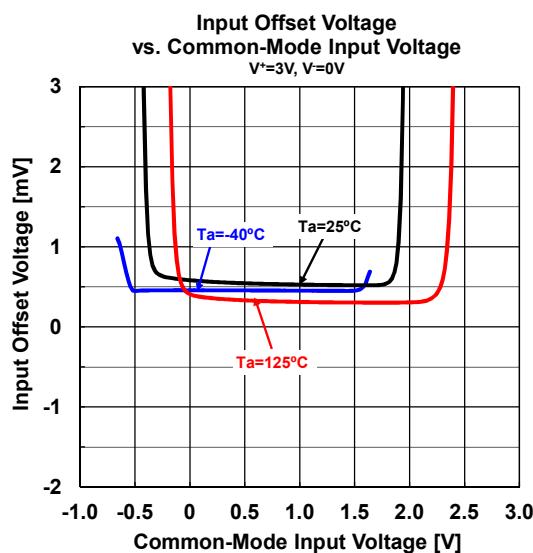

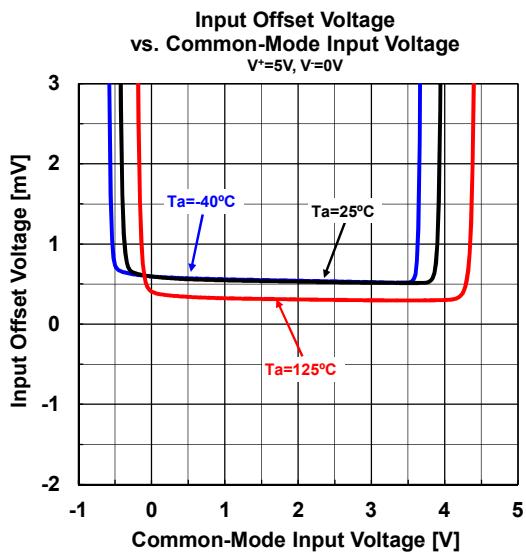

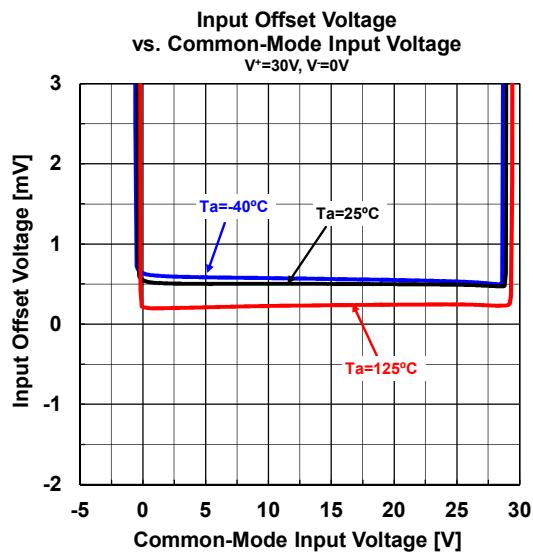

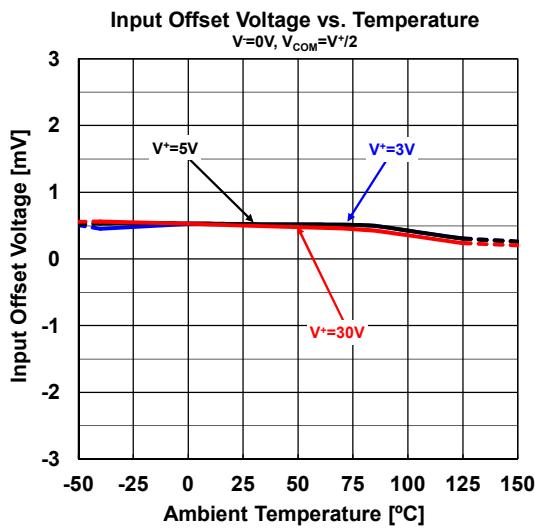

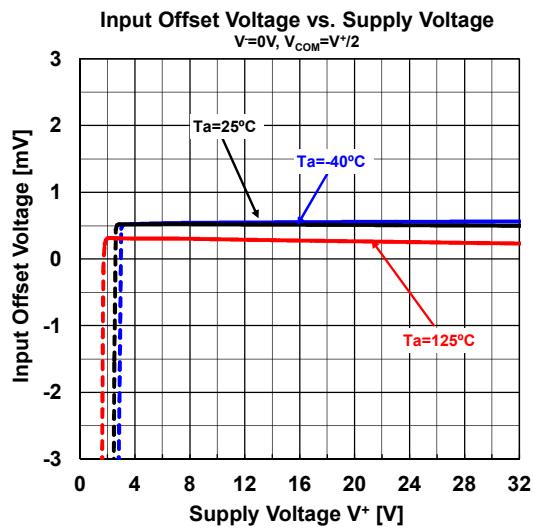

Supply Current vs. Supply Voltage
 $V=0V$, $G_V=0dB$

Supply Current vs. Temperature
 $V=0V$, $G_V=0dB$

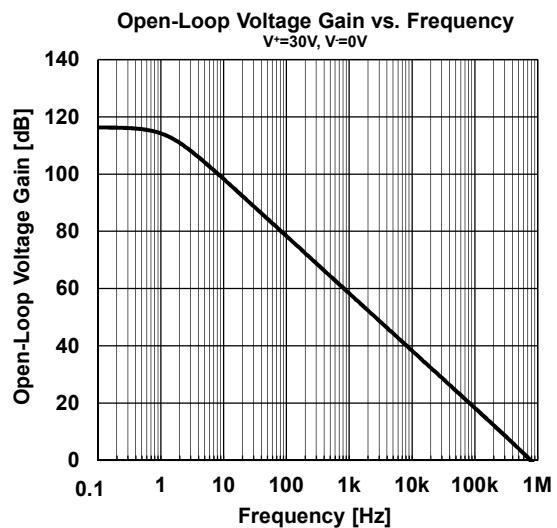

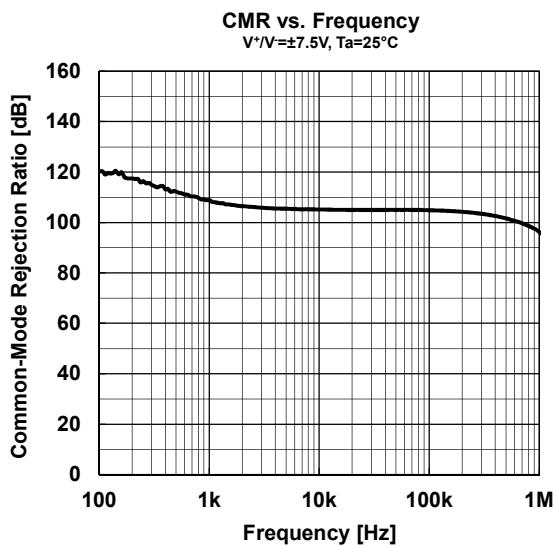

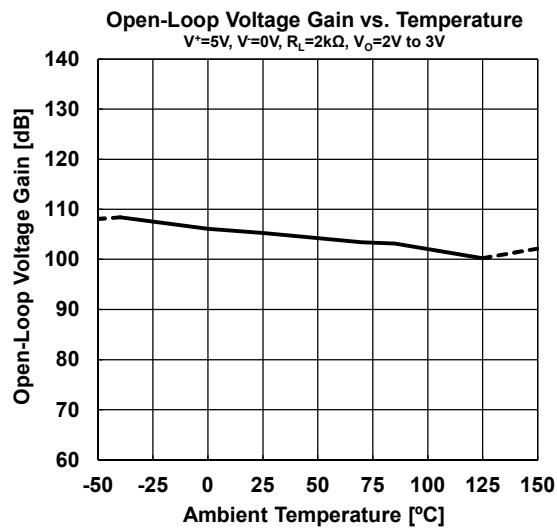

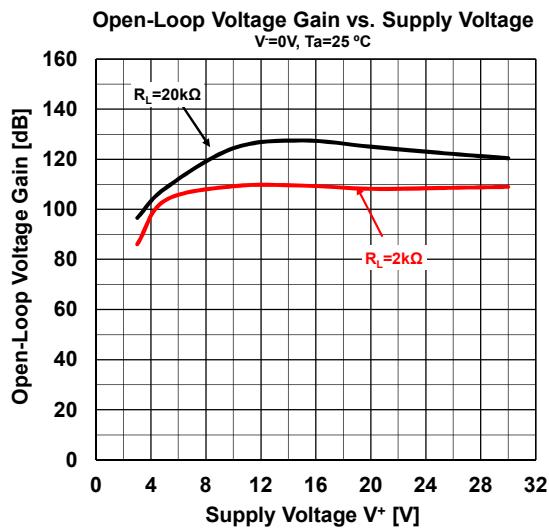

■ TYPICAL CHARACTERISTICS

NJM2902C / NJM2902CA

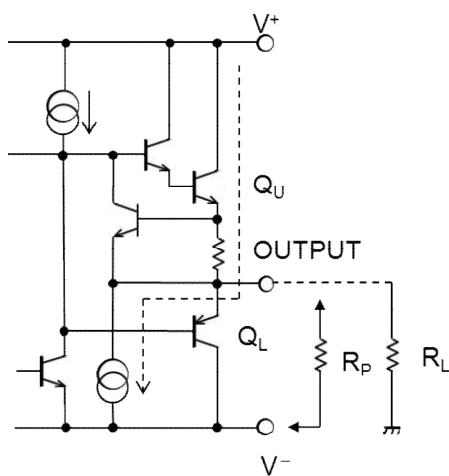

■ TYPICAL CHARACTERISTICS

■ APPLICATION

Improvement of Cross-over Distortion

Equivalent circuit at the output stage

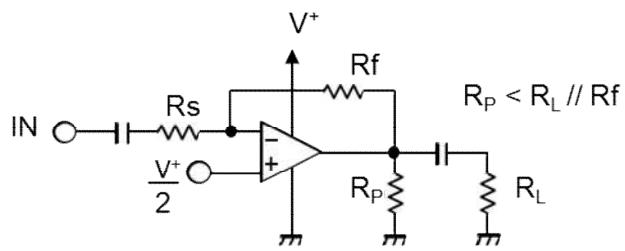

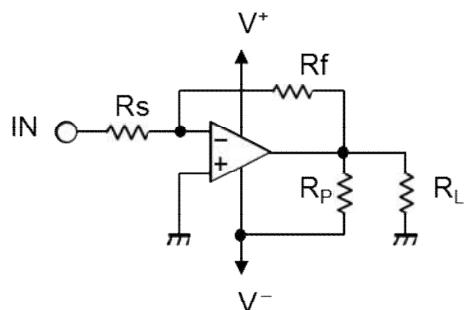

NJM2902C / NJM2902CA,in its static state (No in and output condition) when design,Q_U being biassed by constant current (break down beam) yet,Q_L stays OFF.

While using with both power source mode,the cross-over distortion might occur instantly when Q_L ON.

There might be cases when application for amplifier of audio signals,not only distortion but also the apparent frequency bandwidth being narrowed remarkably.

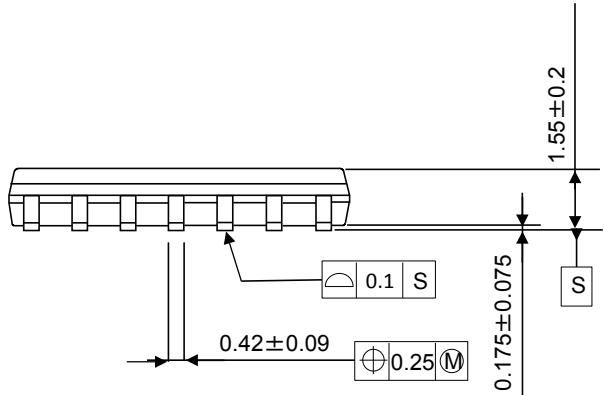

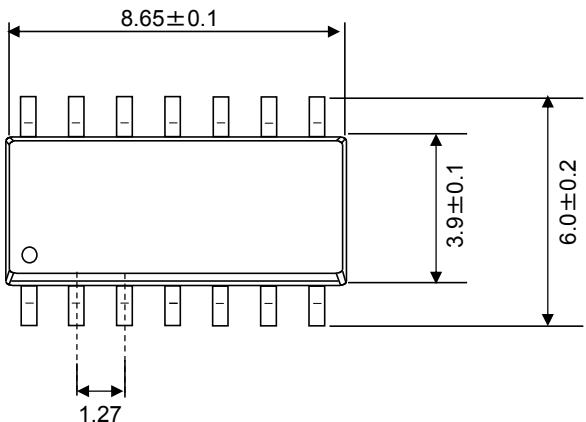

It is adjustable especially when using both power source mode,constantly to use with higher current on Q_U than the load current (including feedback current),and then connect the pull-down resistor R_P at the part between output and V pins.
