

## 2ch switching regulator IC

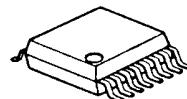

### ■GENERAL DESCRIPTION

The **NJU7680** is a high-speed low voltage operation switching regulator control IC. It features a totem pole driver that can directly drive an external MOS-FET.

Each channel has an on/off switch. Therefore, the power sequence can be activated externally.

Internal soft-start function, dead time control and timer latch function are included, and those functions can be easily controlled by external component.

### ■FEATURES

- Step-Down, Step-Up/SEPIC circuit
- PWM switching control
- Operating Voltage                          2.3V to 7V
- Wide Oscillator Range                      300kHz to 1MHz
- Soft-Start Function                        Internal: 4ms typ. or adjustable
- Channel ON/OFF Function
- Standby Quiescent Current                1 $\mu$ A max.
- Dead Time Control
- Timer Latch for Short Circuit Protection
- C-MOS Technology
- Package Outline                            NJU7680V : SSOP16

## •On/Off Function

The On/Off switch for each channel is controlled by CE pin.

→ Setting the CE low will turn off all applicable channels' circuit.

→ Turning off both channels will turn off all circuit.

→ Opening the RT pin will turn off all circuit regardless of input signals from CE pin.

## •Soft Start Feature (Soft Start)

The soft-start is internally set for 4ms typ. To adjust the time, insert resistance or connect capacitor to the DTC pin.

## •Max Duty

Max Duty is set 90% for CH1 (Step-up) and 100% for CH2 (Step-down).

Max Duty can be adjusted by connecting the VERG pin to the DTC pin. When not limiting Max Duty, connect DTC pin to VREG pin by resistor more than 2kΩ.

## •Short Circuit Protection

The short circuit protection block employs time latch, and protection delay time can be adjusted by a capacitor connected to SCP pin. The program of timer latch circuit can be reset by restarting the power (supply voltage must be lower than UVLO sensing voltage), setting IC to standby status, or lowering SCP pin to GND level.

## ■ABSOLUTE MAXIMUM RATINGS (Ta=25°C)

PARAMETER	SYMBOL	MAXIMUM RATINGS	UNIT
Supply Voltage	V <sup>+</sup>	+8	V
Output Pin Current	I <sub>O</sub>	±50	mA
CE1 Pin Voltage	V <sub>CE1</sub>	+8 (*2)	V
CE2 Pin Voltage	V <sub>CE2</sub>	+8 (*2)	V

(\*4) :

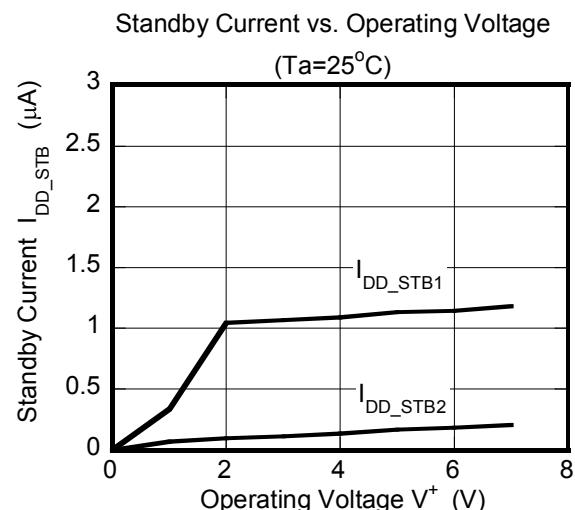

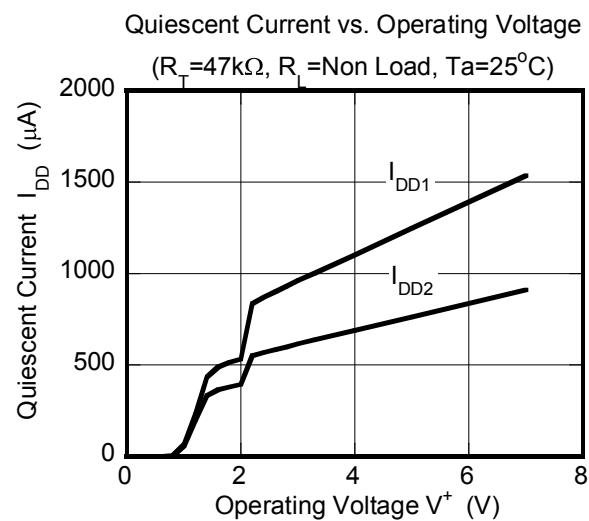

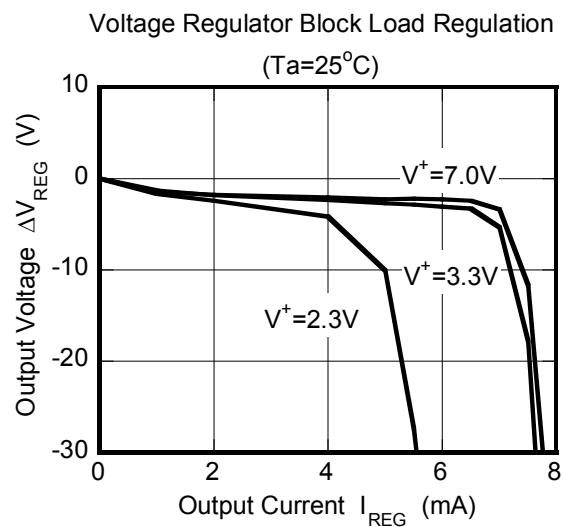

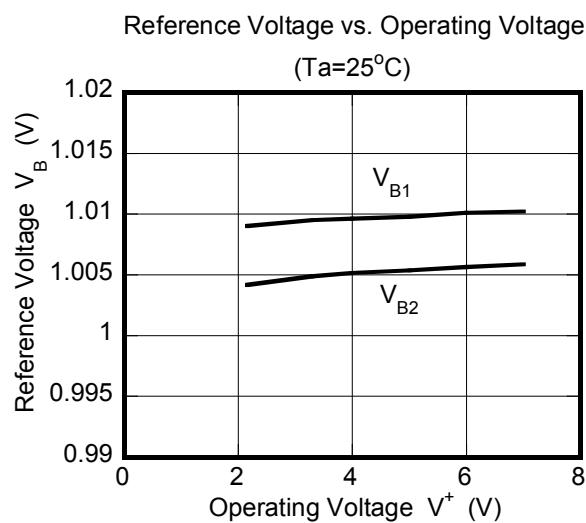

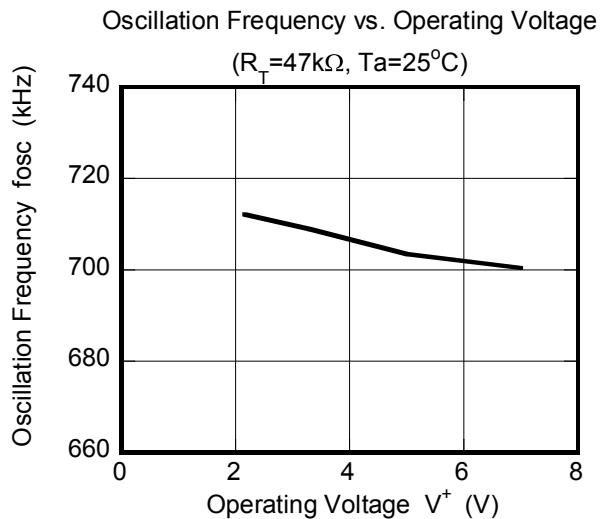

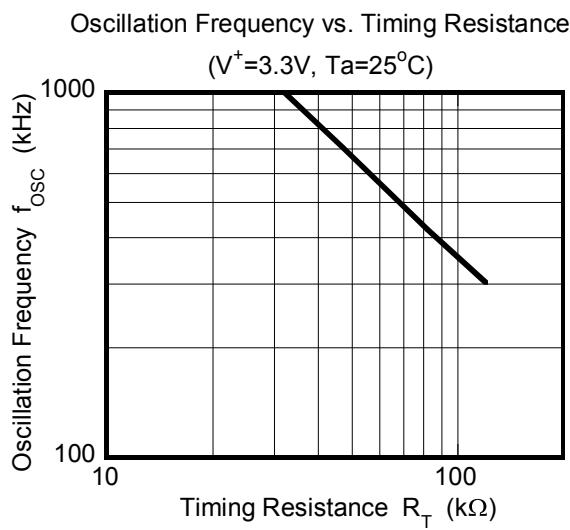

CH1 is a step-up converter that is intended to drive Nch MOSFET. OUT1 terminal output as High levels is defined as the maximum duty cycle.

CH2 is a step-down converter that is intended to drive Pch MOSFET. OUT2 terminal output as Low level is defined as the maximum duty cycle.
