

# **R1283x SERIES**

## 2ch DC/DC for CCD & OLED

NO.EA-157-231116

## OUTLINE

The R1283x 2ch DC/DC converter is designed for CCD & OLED Display power source. It contains a step up DC/DC converter and an inverting DC/DC converter to generate two required voltages by CCD & OLED Display. Step up DC/DC converter generates boosted output voltage up to 20V. Inverting DC/DC converter generates negative voltage up to V<sub>IN</sub> voltage minus 20V independently. Start up sequence is internally made. Each of the R1283x series consists of an oscillator, a PWM control circuit, a voltage reference, error amplifiers, over current protection circuits, short protection circuits, an under voltage lockout circuit (UVLO), an Nch driver for boost operation, a Pch driver for inverting. A high efficiency boost and inverting DC/DC converter can be composed with external inductors, diodes, capacitors, and resistors.

## **FEATURES**

- Operating Voltage ...... 2.5V to 5.5V
- Step Up DC/DC (CH1)
  - Internal Nch MOSFET Driver (RoN=400mΩTyp.) Adjustable Vout Up to 20V with external resistor Internal Soft start function (Typ. 4.5ms) Over Current Protection Maximum Duty Cycle: 91%(Typ.)
- Inverting DC/DC (CH2)

Internal Pch MOSFET Driver ( $R_{ON}$ =400m $\Omega$  Typ.) Adjustable V<sub>OUT</sub> Up to Vdd-20V with external resistor Auto Discharge function for negative output Internal Soft start function (Typ. 4.5ms) Over Current Protection Maximum Duty Cycle: 91%(Typ.)

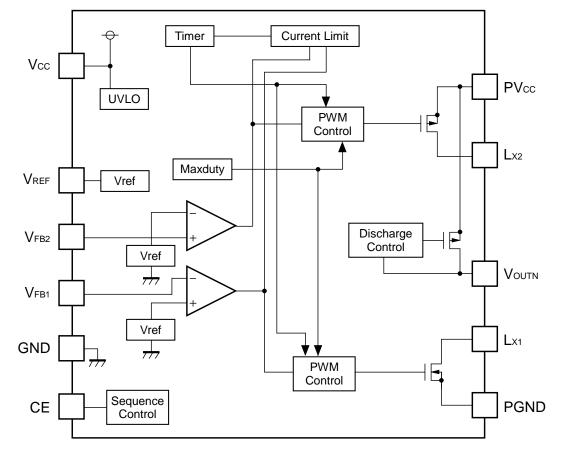

• Short Protection with timer latch function (Typ. 50ms); Short condition for either or both two outputs makes all output drivers off and latches./ If the maximum duty cycle continues for a certain time, these output drivers will be turned off.

• Packages ...... DFN(PL)2730-12, WLCSP-11-P2

## APPLICATION

- Fixed voltage power supply for portable equipment
- Fixed voltage power supply for CCD, OLED, LCD

## **BLOCK DIAGRAM**

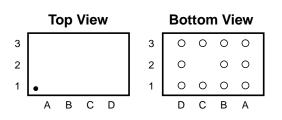

## **SELECTION GUIDE**

The start-up sequence, oscillator frequency, and the package for the ICs can be selected at the user's request.

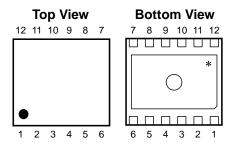

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
R1283Z00x*-E2-F	WLCSP-11-P2	4,000 pcs	Yes	Yes
R1283K00x*-TR	DFN(PL)2730-12	5,000 pcs	Yes	Yes
<ul> <li>(1) Step-up → Inve</li> <li>(2) Inverting → Step</li> <li>* : The oscillator frequ</li> </ul>	0		railable)	

## **PIN CONFIGURATIONS**

### WLCSP-11-P2

### • DFN(PL)2730-12

## **PIN DESCRIPTIONS**

### • WLCSP-11-P2

Pin No	Symbol	Pin Description
A1	PGND	Power GND pin
A2	Vfb1	Feedback pin for Step up DC/DC
A3	L <sub>X1</sub>	Switching pin for Step up DC/DC
B1	PVcc	Power Input pin
B2	CE	Chip Enable pin for the R1283
B3	Lx2	Switching pin for Inverting DC/DC
C1	GND	Analog GND pin
C3	Voutn	Discharge pin for Negative output
D1	Vcc	Analog power source Input pin
D2	Vref	Reference Voltage Output pin
D3	Vfb2	Feedback pin for Inverting DC/DC

## • DFN(PL)2730-12

Pin No	Symbol	Pin Description
1	NC	No Connect
2	Lx1	Switching pin for Step up DC/DC
3	Lx2	Switching pin for Inverting DC/DC
4	Voutn	Discharge pin for Negative Output
5	CE	Chip Enable pin for the R1283
6	VFB2	Feedback pin for Inverting DC/DC
7	Vref	Reference Voltage Output pin
8	Vcc	Analog power source Input pin
9	VFB1	Feedback pin for Step up DC/DC
10	GND	Analog GND pin
11	PVcc	Power Input pin
12	PGND	Power GND pin

\*) Tab is GND level. (They are connected to the reverse side of this IC.)

The tab is better to be connected to the GND, but leaving it open is also acceptable.

## **ABSOLUTE MAXIMUM RATINGS**

BSOLUTE MAXIMUM RATINGS (GND/PGND			PGND=0	
Symbol	Item	Rating	J Unit	
Vcc	Vcc / PVcc pin Voltage	6.5	V	
Vdtc	V <sub>FB1</sub> pin Voltage	-0.3 to Vcc+0.3	V	
Vfb	V <sub>FB2</sub> pin Voltage	-0.7(*1) to Vcc+0.3	V	
VCE	CE pin Voltage	-0.3 to Vcc+0.3	V

Topt	Operating Temperature Range	-40 to 85	°C	
Tstg	Storage Temperature Range	-55 to 125	°C	

\*1) In case the voltage range is from -0.7V to -0.3V, permissible current is 10mA or less.

\*2) For Power Dissipation, please refer to PACKAGE INFORMATION.

## ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field.

The functional operation at or over these absolute maximum ratings is not assured.

## RECOMMENDED OPERATING CONDITIONS (ELECTRICAL CHARACTERISTICS)

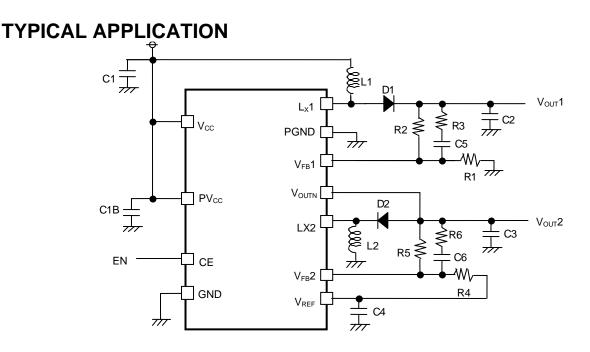

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

R1283x

## Pin Connection

Externally short Vcc pin to PVcc pin. Externally short GND pin to PGND pin.

## • Step-up DC/DC converter output voltage setting

The output voltage V<sub>OUT1</sub> of the step-up DC/DC converter is controlled with maintaining the V<sub>FB1</sub> as 1.0V. V<sub>OUT1</sub> can be set with adjusting the values of R1 and R2 as in the next formula. V<sub>OUT1</sub> can be set equal or less than 20V.

 $V_{OUT1} = V_{FB1} \times (R1+R2) / R1$ 

## • Inverting DC/DC converter output voltage setting

The output voltage V<sub>OUT2</sub> of the inverting DC/DC converter is controlled with maintaining the V<sub>FB2</sub> as 0V. V<sub>OUT2</sub> can be set with adjusting the values of R4 and R5 as in the next formula. V<sub>OUT2</sub> = V<sub>FB2</sub> - (V<sub>REF</sub>-V<sub>FB2</sub>) × R5 / R4

## • Auto Discharge Function

When CE level turns from "H" to "L" level, the R1283x goes into standby mode and switching of the outputs of  $Lx_1$  and  $Lx_2$  will stop. Then discharge Tr. between  $V_{OUT2}$  and  $V_{CC}$  turns on and discharges the negative output voltage. When the negative output voltage is discharged to 0V, the Tr. turns off and the negative output will be Hi-Z.

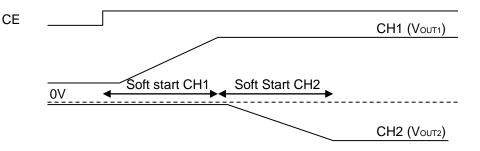

When the Auto discharge function is unnecessary, VOUTN connect to Vcc or make be Hi-Z.

CE		
<u>0V</u>		
Negative output		
	Discharge Hi-Z	<b>→</b>

Nisshinbo Micro Devices Inc.

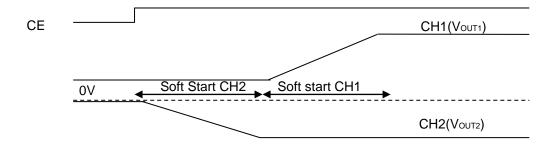

### Start up Sequence (R1283x001x)

When CE level turns from "L" to "H" level, the softstart of CH1 starts the operation. After detecting output voltage of CH1(V<sub>OUT1</sub>) as the nominal level, the soft start of CH2 starts the operation.

#### • Start up Sequence (R1283x002x)

When CE level turns from "L" to "H" level, the softstart of CH2 starts the operation. After detecting output voltage of CH2(Vout2) as the nominal level, the soft start of CH1 starts the operation.

#### Short protection circuit timer

In case that the voltage of V<sub>FB1</sub> drops, the error amplifier of CH1 outputs "H". In case that the voltage of V<sub>FB2</sub> rises, the error amplifier of CH2 outputs "L". The built-in short protection circuit makes the ineternal timer operate with detecting the output of the error amplifier of CH1 as "H", or the output of the error amplifier of CH2 as "L". After the setting time will pass, the switching of LX1 and LX2 will stop.

To release the latch operatoion, make the  $V_{CC}$  set equal or less than UVLO level and restart or set the CE pin as "L" and make it "H" again.

During the softstart operation of CH1 and CH2, the timer operates independently from the outputs of the error amplifiers. Therefore, even if the softstart cannot finish correctly because of the short circuit, the protection timer function will be able to work correctly.

### Phase Compensation

DC/DC converter's phase may lose 180 degree by external components of L and C and load current. Because of this, the phase margin of the system will be less and the stability will be worse. Therefore, the phase must be gained.

A pole will be formed by external components, L and C. Fpole ~ 1 /  $\{2 \times \pi \times \sqrt{(L1 \times C2)}\}$  (CH1) Fpole ~ 1 /  $\{2 \times \pi \times \sqrt{(L2 \times C3)}\}$  (CH2)

Zero will be formed with R2, C5, R5, and C6.

 $\begin{array}{ll} \mbox{Fzero} \sim 1/(2 \times \pi \times R2 \times C5) & (CH1) \\ \mbox{Fzero} \sim 1/(2 \times \pi \times R5 \times C6) & (CH2) \\ \mbox{Set the cut-off frequency of the Zero close to the cut off frequency of the pole by L and C. } \end{array}$ 

### • To reduce the noise of Feedback voltage

If the noise of the system is large, the output noise affects the feedback and the operation may be unstable. In that case, resistor values, R1, R2, R4, and R5 should be set lower and make the noise into the feedback pin reduce. Another method is set R3 and R6. The appropriate value range is from  $1k\Omega$  to  $5k\Omega$ .

- Set a ceramic 1 $\mu$ F or more capacitor as C1B between V<sub>CC</sub> pin and GND. Set another 4.7 $\mu$ F or more capacitor between PV<sub>CC</sub> and GND as C1.
- Set a ceramic 1μF or more capacitor between V<sub>OUT1</sub> and GND, and between V<sub>OUT2</sub> and GND for each as C2 and C3. Recommendation value range is from 4.7μF to 22μF.
- Set a ceramic capacitor between VREF and GND as C4. Recommendation value range is from 0.1 $\mu$ F to 2.2 $\mu$ F.

## **Operation of Step-up DC/DC Converter and Output Current**

Nisshinbo Micro Devices Inc.

There are two operation modes for the PWM control step-up switching regulator, that is the continuous mode and the discontinuous mode.

When the Lx Tr. is on, the voltage for the inductor L will be VIN. The inductor current (IL1) will be;

When the Lx transistor turns off, power will supply continuously. The inductor current at off (IL2) will be;

 $IL2 = (V_{OUT} - V_{IN}) \times tf / L$ .....Formula2

In terms of the PWM control, when the tf=toff, the inductor current will be continuous, the operation of the switching regulator will be continuous mode.

In the continuous mode, the current variation of IL1 and IL2 are same, therefore

 $V_{IN} \times ton / L = (V_{OUT} - V_{IN}) \times toff / L$ ......Formula3

In the continuous mode, the duty cycle will be

DUTY = ton / (ton + toff) = (Vout - VIN) / Vout ......Formula4

If the input power equals to output power,

 $I_{OUT} = V_{IN^2} \times ton / (2 \times L \times V_{OUT})$ .....Formula5

When lout becomes more then Formula5, it will be continuous mode.

In this moment, the peak current, ILxmax flowing through the inductor is described as follows:

 $ILxmax = I_{OUT} \times V_{OUT} / V_{IN} + V_{IN} \times ton / (2 \times L) \dots$ Formula6

 $ILxmax = I_{OUT} \times V_{OUT} / V_{IN} + V_{IN} \times T \times (V_{OUT} - V_{IN}) / (2 \times L \times V_{OUT}) \dots Formula7$ 

Therefore, peak current is more than IouT. Considering the value of ILxmax, the condition of input and output, and external components should be selected.

The explanation above is based on the ideal calculation, and the loss caused by Lx switch and external components is not included.

The actual maximum output current is between 50% and 80% of the calculation.

Especially, when the IL is large, or  $V_{IN}$  is low, the loss of  $V_{IN}$  is generated with on resistance of the switch. As for  $V_{OUT}$ ,  $V_F$ (as much as 0.3V) of the diode should be considered.

## **Operation of Inverting DC/DC Converter and Output Current**

There are also two operation modes for the PWM control inverting switching regulator, that is the continuous mode and the discontinuous mode.

When the Lx Tr. is on, the voltage for the inductor L will be VIN. The inductor current (IL1) will be;

 $IL1 = V_{IN} \times ton \ / \ L..... Formula8$ 

Inverting circuit saves energy during on time of Lx Tr, and supplies the energy to output during off time, output voltage opposed to input voltage is obtained. The inductor current at off (IL2) will be;

IL2 = |Vout| × tf / L......Formula9

In terms of the PWM control, when the tf=toff, the inductor current will be continuous, the operation of the switching regulator will be continuous mode.

In the continuous mode, the current variation of IL1 and IL2 are same, therefore

$I_{IN} \times \text{ton} / L =  V_{OUT}  \times \text{toff} / L$	Formula10

In the continuous mode, the duty cycle will be:

 $DUTY = ton / (ton + toff) = |V_{OUT}| / (|V_{OUT}| + V_{IN}) \dots Formula11$ 

If the input power equals to output power,

 $I_{OUT} = V_{IN}^2 \times ton / 2L / (V_{IN} + |V_{OUT}|)....Formula12$ 

When IOUT becomes more then Formula12, it will be continuous mode.

In this moment, the peak current, ILxmax flowing through the inductor is described as follows:

$ILxmax = I_{OUT} \times (V_{IN} +  V_{OUT} ) / V_{IN} + V_{IN} \times ton / (2 \times L).$	Formula13
$ILxmax = Iout \times (VIN +  Vout ) / V_{IN} + V_{IN} \times  Vout  \times T / \{ 2 \times L \times ( Vout  + V_{IN}) \}$	Formula14

Therefore, peak current is more than IouT. Considering the value of ILxmax, the condition of input and output, and external components should be selected.

The explanation above is based on the ideal calculation, and the loss caused by Lx switch and external components is not included.

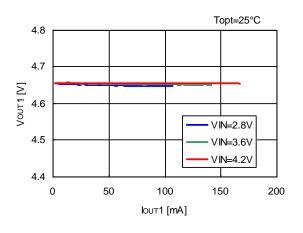

The actual maximum output current is between 50% and 80% of the calculation.

Especially, when the IL is large, or  $V_{IN}$  is low, the loss of  $V_{IN}$  is generated with on resistance of the switch. As for  $V_{OUT}$ ,  $V_F$  (as much as 0.3V) of the diode should be considered.

## **POWER DISSIPATION**

## DFN3030-12

Ver. A

The power dissipation of the package is dependent on PCB material, layout, and environmental conditions. The following measurement conditions are based on JEDEC STD. 51-7.

#### **Measurement Conditions**

ltem	Measurement Conditions	
Environment	Mounting on Board (Wind Velocity = 0 m/s)	
Board Material	Glass Cloth Epoxy Plastic (Four-Layer Board)	
Board Dimensions	76.2 mm × 114.3 mm × 0.8 mm	
Copper Ratio	Outer Layer (First Layer): Less than 95% of 50 mm Square Inner Layers (Second and Third Layers): Approx. 100% of 50 mm Square Outer Layer (Fourth Layer): Approx. 100% of 50 mm Square	
Through-holes	φ 0.3 mm × 32 pcs	

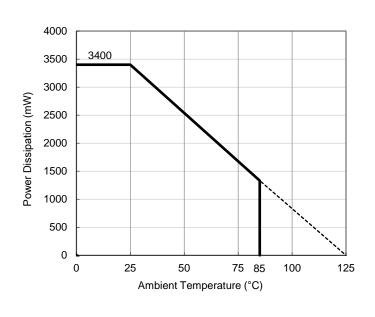

#### **Measurement Result**

(Ta = 25°C, Tjmax = 125°C)

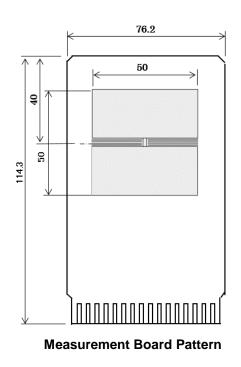

Item	Measurement Result
Power Dissipation	3400 mW
Thermal Resistance (θja)	θja = 29°C/W
Thermal Characterization Parameter (ψjt)	ψjt = 3.1°C/W

θja: Junction-to-Ambient Thermal Resistance

wjt: Junction-to-Top Thermal Characterization Parameter

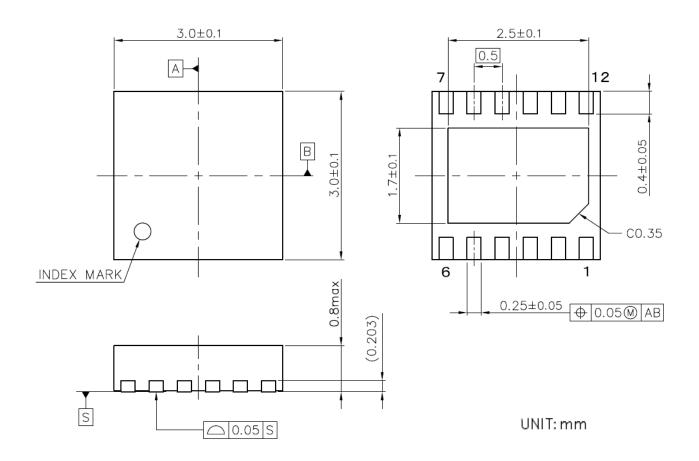

**Power Dissipation vs. Ambient Temperature** 

## PACKAGE DIMENSIONS

## DFN3030-12

DM-DFN3030-12-JE-C

DFN3030-12 Package Dimensions (Unit: mm)

- 1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to our sales representatives for the latest information thereon.
- 2. The materials in this document may not be copied or otherwise reproduced in whole or in part without the prior written consent of us.
- 3. This product and any technical information relating thereto are subject to complementary export controls (so-called KNOW controls) under the Foreign Exchange and Foreign Trade Law, and related politics ministerial ordinance of the law. (Note that the complementary export controls are inapplicable to any application-specific products, except rockets and pilotless aircraft, that are insusceptible to design or program changes.) Accordingly, when exporting or carrying abroad this product, follow the Foreign Exchange and Foreign Trade Control Law and its related regulations with respect to the complementary export controls.
- 4. The technical information described in this document shows typical characteristics and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under our or any third party's intellectual property rights or any other rights.
- 5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death should first contact us.
  - Aerospace Equipment
  - Equipment Used in the Deep Sea
  - Power Generator Control Equipment (nuclear, steam, hydraulic, etc.)
  - Life Maintenance Medical Equipment
  - Fire Alarms / Intruder Detectors
  - Vehicle Control Equipment (automotive, airplane, railroad, ship, etc.)
  - Various Safety Devices
  - Traffic control system
  - Combustion equipment

In case your company desires to use this product for any applications other than general electronic equipment mentioned above, make sure to contact our company in advance. Note that the important requirements mentioned in this section are not applicable to cases where operation requirements such as application conditions are confirmed by our company in writing after consultation with your company.

- 6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
- 7. The products have been designed and tested to function within controlled environmental conditions. Do not use products under conditions that deviate from methods or applications specified in this datasheet. Failure to employ the products in the proper applications can lead to deterioration, destruction or failure of the products. We shall not be responsible for any bodily injury, fires or accident, property damage or any consequential damages resulting from misuse or misapplication of the products.
- 8. Quality Warranty
  - 8-1. Quality Warranty Period

In the case of a product purchased through an authorized distributor or directly from us, the warranty period for this product shall be one (1) year after delivery to your company. For defective products that occurred during this period, we will take the quality warranty measures described in section 8-2. However, if there is an agreement on the warranty period in the basic transaction agreement, quality assurance agreement, delivery specifications, etc., it shall be followed.

8-2. Quality Warranty Remedies

When it has been proved defective due to manufacturing factors as a result of defect analysis by us, we will either deliver a substitute for the defective product or refund the purchase price of the defective product.

- Note that such delivery or refund is sole and exclusive remedies to your company for the defective product.
- 8-3. Remedies after Quality Warranty Period

With respect to any defect of this product found after the quality warranty period, the defect will be analyzed by us. On the basis of the defect analysis results, the scope and amounts of damage shall be determined by mutual agreement of both parties. Then we will deal with upper limit in Section 8-2. This provision is not intended to limit any legal rights of your company.

- 9. Anti-radiation design is not implemented in the products described in this document.
- 10. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
- 11. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
- 12. Warning for handling Gallium and Arsenic (GaAs) products (Applying to GaAs MMIC, Photo Reflector). These products use Gallium (Ga) and Arsenic (As) which are specified as poisonous chemicals by law. For the prevention of a hazard, do not burn, destroy, or process chemically to make them as gas or power. When the product is disposed of, please follow the related regulation and do not mix this with general industrial waste or household waste.
- 13. Please contact our sales representatives should you have any questions or comments concerning the products or the technical information.
