

500 mA 36V Input Low Supply Current LDO for Automotive Applications

NO. EC-330-180510

## OUTLINE

R8154x is a CMOS-based LDO that specifically designed for automotive applications featuring 500 mA output current and 36 V input voltage. In addition to a conventional regulator circuit, R8154x consists of a constant slope circuit as a soft-start function, a fold-back protection circuit, a short current limit circuit, and a thermal shutdown circuit. Besides the low supply current by CMOS, the operating temperature is  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$  and the maximum input voltage is 36 V, the R8154x is very suitable for power source of car accessories.

R8154x supports the internal fixed output voltage type of R8154xxxxB/D/E/F and the adjustable output voltage setting type, which is controlled by external resistances, of R8154J001C. As for the soft-start time, R8154x is fixed internally in R8154xxxxB/D/E/F and is set to 120  $\mu\text{s}$  (Typ). And the soft-start time in R8154Jxx1E/F is adjustable by external capacitors. R8154x supports the auto-discharge function at standby in R8154xxxxD/F.

R8154x is available in two packages for ultra high wattage: HSOP-6J and TO-252-5-P2.

## FEATURES

- Input Voltage Range (Maximum Rating) ..... 3.5 V to 36.0 V (50.0V)
- Operating Temperature range .....  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$
- Supply Current ..... Typ. 18  $\mu\text{A}$
- Standby Current ..... Typ. 0.1  $\mu\text{A}$
- Dropout Voltage ..... Typ. 0.35 V ( $I_{\text{OUT}} = 500 \text{ mA}$ ,  $V_{\text{OUT}} = 5.0 \text{ V}$ )
- Output Voltage Accuracy .....  $\pm 0.8\%$  ( $V_{\text{OUT}} \leq 5.0 \text{ V}$ )
- Temperature-Drift Coefficient of Output Voltage ..... Typ.  $\pm 60 \text{ ppm}/^{\circ}\text{C}$  ( $-40^{\circ}\text{C} \leq T_a \leq 125^{\circ}\text{C}$ )
- Line Regulation ..... Typ. 0.01%/V
- Packages ..... HSOP-6J, TO-252-5-P2
- Output Voltage Range ..... 2.5 V/2.8 V/3.0 V/3.3 V/3.4 V/5.0 V/6.0 V/8.0 V /8.5 V/9.0 V

\*Contact our sales representatives for other voltages.

R8154J001C: Adjustable from 2.5 V to 12.0 V

with External Resistors

Feedback Voltage: 2.5 V

- Built-in Short Current Limit Circuit ..... Typ. 75 mA
- Built-in Fold-Back Protection Circuit ..... Min. 500 mA
- Built-in Thermal Shutdown Circuit ..... Typ.  $160^{\circ}\text{C}$
- Built-in Soft-start Circuit ..... Typ.120  $\mu\text{s}$

R8154Jxx1E/F: Adjustable Time

with External Capacitors

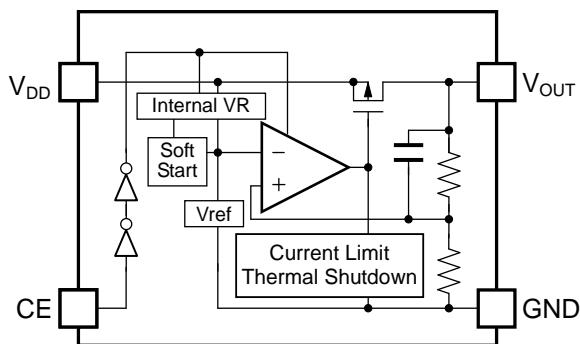

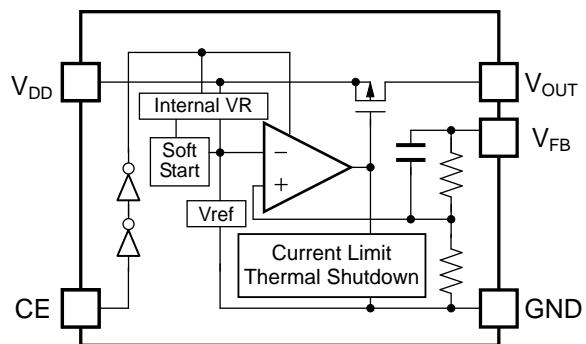

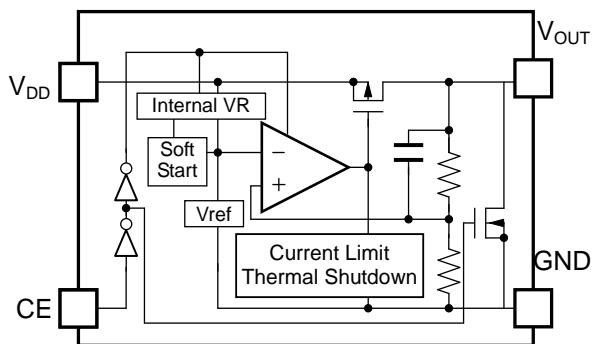

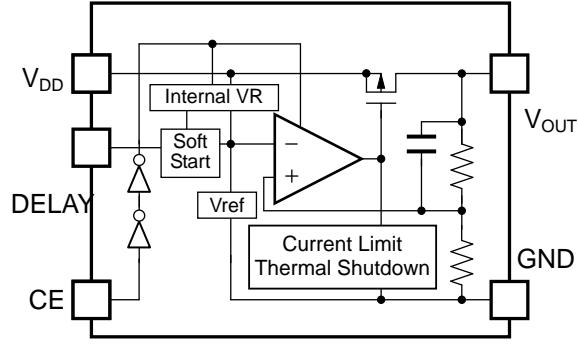

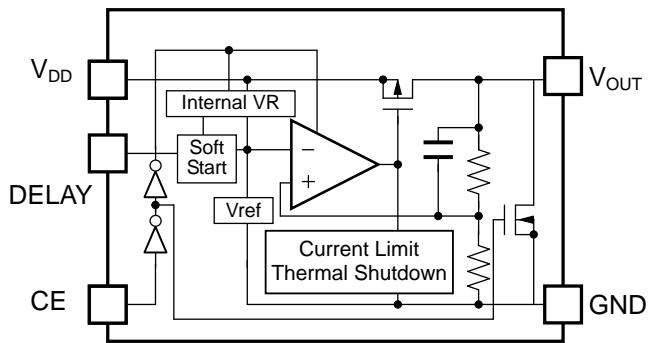

- Ceramic Capacitors can be used ..... 0.1  $\mu\text{F}$  or more

R8154J001C: 1.0  $\mu\text{F}$  or more

## APPLICATIONS

- Power supply for electronic control units such as EV inverter and battery charge control unit.

## SELECTION GUIDE

The output voltage, version, and package type for this device can be selected at the user's request.

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
R8154Sxx2*-E2-FE	HSOP-6J	1,000 pcs	Yes	Yes
R8154Jxx1*-T1-FE	TO-252-5-P2	3,000 pcs	Yes	Yes

xx: Specify the set output voltage ( $V_{SET}$ )

2.5 V (25) / 2.8 V (28) / 3.0 V (30) / 3.3 V (33) / 3.4 V (34) / 5.0 V (50) / 6.0 V (60) /  
8.0 V (80) / 8.5 V (85) / 9.0 V (90)

Note: Contact our sales representatives for other voltages.

Adjustable output voltage setting type is fixed to (00)

Note: R8154J001C-T1-#E only support

\* : Specify the version with desired functions

B: No auto-discharge function

C: No auto-discharge function / Adjustable output voltage setting

D: Auto-discharge function

E: No auto-discharge function / Adjustable soft-start time setting

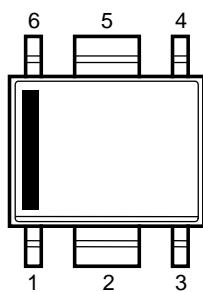

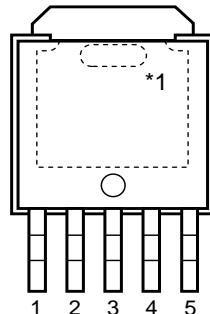

F: Auto-discharge function / Adjustable soft-start time setting

**Note: R8154Sxx2\*-E2-FE is only for R8154Sxx2B/D**

R8 Automotive Class Code

Operating Temperature Range	Guaranteed Specs Temperature Range	Screening
-40°C to 125°C	-40°C to 125°C	High and low temperature

Auto-Discharge function quickly lowers the output voltage to 0 V by releasing the electrical charge in the external capacitor when the chip enable signal is switched from the active mode to the standby mode.

**PIN DESCRIPTION****HSOP-6J****TO-252-5-P2****HSOP-6J**

Pin No.	Symbol	Description	
1	V <sub>DD</sub>	Input Pin	
2	GND	Ground Pin	
3	GND	Ground Pin

### ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

## RECOMMENDED OPERATING RATINGS

Symbol	Item	Rating	Unit
V <sub>IN</sub>	Input Voltage	3.5 to 36	V
T <sub>a</sub>	Operating Temperature Range	-40 to 125	°C

### RECOMMENDED OPERATING RATINGS

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating ratings. The semiconductor devices cannot operate normally over the recommended operating ratings, even if when they are used over such ratings by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating ratings.

## ELECTRICAL CHARACTERISTICS

## TECHNICAL NOTES

### Phase Compensation

In LDO regulators, phase compensation is provided to secure stable operation even when the load current is varied. For this purpose, use 0.1  $\mu\text{F}$  or more (R8154xxxxB/D/E/F), 1.0  $\mu\text{F}$  or more (R8154J001C) of the capacitor C2.

When using a tantalum type capacitor and the ESR (Equivalent Series Resistance) value is large, the output might be unstable. Evaluate the circuit including consideration of frequency characteristics.

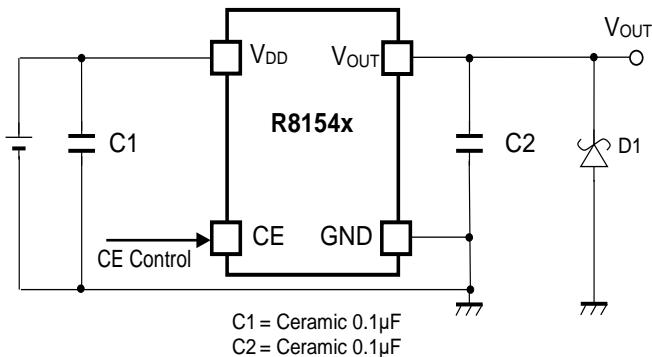

For the externally adjustable output voltage type (R8154J001C), use 10 k $\Omega$  or lower resistance R2.

### PCB Layout

Ensure the V<sub>DD</sub> and GND lines are sufficiently robust. If their impedance is too high, noise pickup or unstable operation may result. Connect 0.1  $\mu\text{F}$  or more of the capacitor C1 between the V<sub>DD</sub> and GND, and as close as possible to the pins.

In addition, connect the capacitor C2 between V<sub>OUT</sub> and GND, and as close as possible to the pins.

## TYPICAL APPLICATION FOR IC CHIP BREAKDOWN PROVENTION

When a sudden surge of electrical current travels along the V<sub>OUT</sub> pin and GND due to a short-circuit, electrical resonance of a circuit involving an output capacitor (C<sub>OUT</sub>) and a short circuit inductor generates a negative voltage and may damage the device or the load devices. Connecting a schottky diode (D1) between the V<sub>OUT</sub> pin and GND has the effect of preventing damage to them.

## APPLICATION INFORMATION

### Thermal Shutdown Function

Thermal shutdown function is included in this device. If the junction temperature is more than or equal to 160°C (Typ.), the operation of the regulator would stop. After that, when the junction temperature is less than or equal to 135°C (Typ.), the operation of the regulator would restart. Unless the cause of rising temperature is removed, the regulator repeats on and off, and output waveform would be like consecutive pulses.

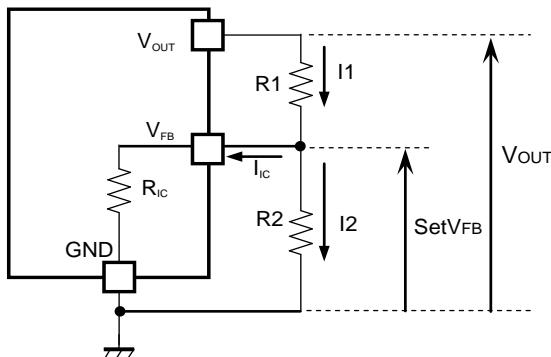

### Adjustable Output Voltage Setting (R8154J001C)

The output voltage of R8154J001C can be adjusted by using the external divider resistors (R1, R2). By using the following equation, the output voltage ( $V_{OUT}$ ) can be determined. The voltage which is fixed inside the IC is described as  $V_{FB}$ .

$$V_{OUT} = V_{FB} \times ((R1 + R2) / R2)$$

Recommended Range:  $2.5 \text{ V} \leq V_{OUT} \leq 12.0 \text{ V}$

$$V_{FB} = 2.5 \text{ V}$$

### Output Voltage Adjustment Using External Divider Resistors (R1, R2)

$R_{IC}$  of the R8154J001C is approximately Typ. 1.35 MΩ (Ta=25°C, guaranteed by Design Engineering). For better accuracy, setting  $R1 \ll R_{IC}$  reduces errors. The resistance value for R2 should be set to 10 kΩ or lower. It is easily affected by noises when setting the value of R1 and R2 larger, which makes the impedance of  $V_{FB}$  pin larger.

$R_{IC}$  could be affected by the temperature, therefore evaluate the circuit taking the actual conditions of use into account when deciding the resistance values for R1 and R2.

**Soft-start Function**

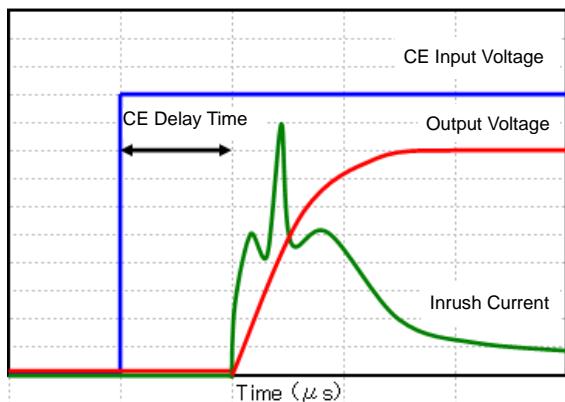

R8154x is equipped with a constant slope circuit, which achieves a soft-start function. This circuit allows the output voltage to start up gradually when the CE is turned on. The constant slope circuit minimizes the inrush current at the start-up and also prevents the overshoot of the output voltage. For R8154xxxxB/C/D, the capacitor to create the start-up slope is built in this device that does not require any external components. The start-up time and the start-up slope angle are fixed inside the device. In R8154Jxx1E/F, the soft-start time is adjustable by inserting the external capacitor to DELAY pin. By using the following equation, the relation between the soft-start time  $t_D$  [s] and DELAY pin capacitor  $C_D$  [F] is determined.

$$t_D = ((C_D + 90 \times 10^{-12}) / I_{DELAY}) \times 0.73$$

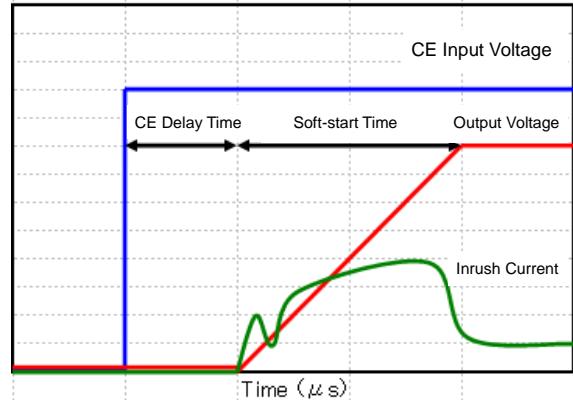

When the capacitor  $C_D$  is not used in R8154Jxx1E/F, use the DELAY pin as OPEN. At that time,  $C_D = 0$  in the above equation, therefore the start-up time is about 26  $\mu$ s. However, be sure to consider approximately 50  $\mu$ s of CE delay time.

**POWER DISSIPATION (TO-252-5-P2)**

Power Dissipation ( $P_D$ ) depends on conditions of mounting on board. This specification is based on the measurement at the condition below:

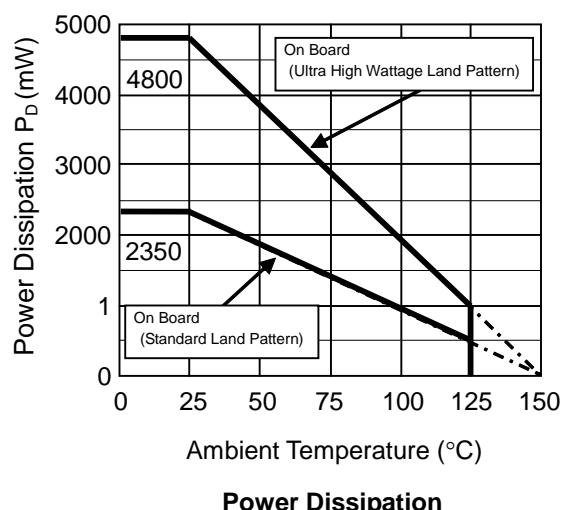

Measurement Conditions

	Ultra High Wattage Land Pattern	Standard Land Pattern
Environment	Mounting on board (Wind velocity 0 m/s)	
Board Material	Glass cloth epoxy plastic (Four-layers)	Glass cloth epoxy plastic (Double layers)
Board Dimensions	76.2 mm x 114.3 mm x 0.8 mm	50 mm x 50 mm x 1.6 mm
Copper Ratio	Top, Back side: Approx. 96%, 2nd, 3rd: 100%	Top side: Approx. 50%, Back side: Approx. 50%
Through - hole	φ 0.4 mm x 30 pcs	φ 0.5 mm x 24 pcs

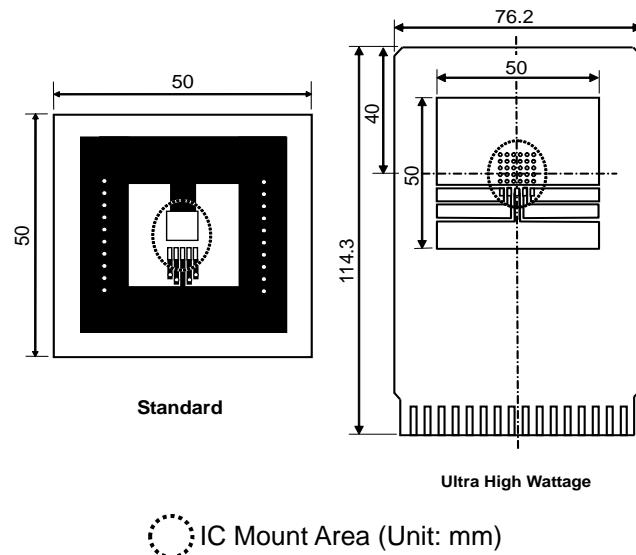

Measurement Result

(Ta = 25°C, Tjmax = 150°C)

	Ultra High Wattage Land Pattern	Standard Land Pattern
Power Dissipation	4800 mW	2350 mW
Thermal Resistance	$\theta_{ja} = (150-25°C)/4.8 W = 26°C/W$	$\theta_{ja} = (150-25°C)/2.35 W = 53°C/W$
	$\theta_{jc} = 7°C/W$	$\theta_{jc} = 17°C/W$

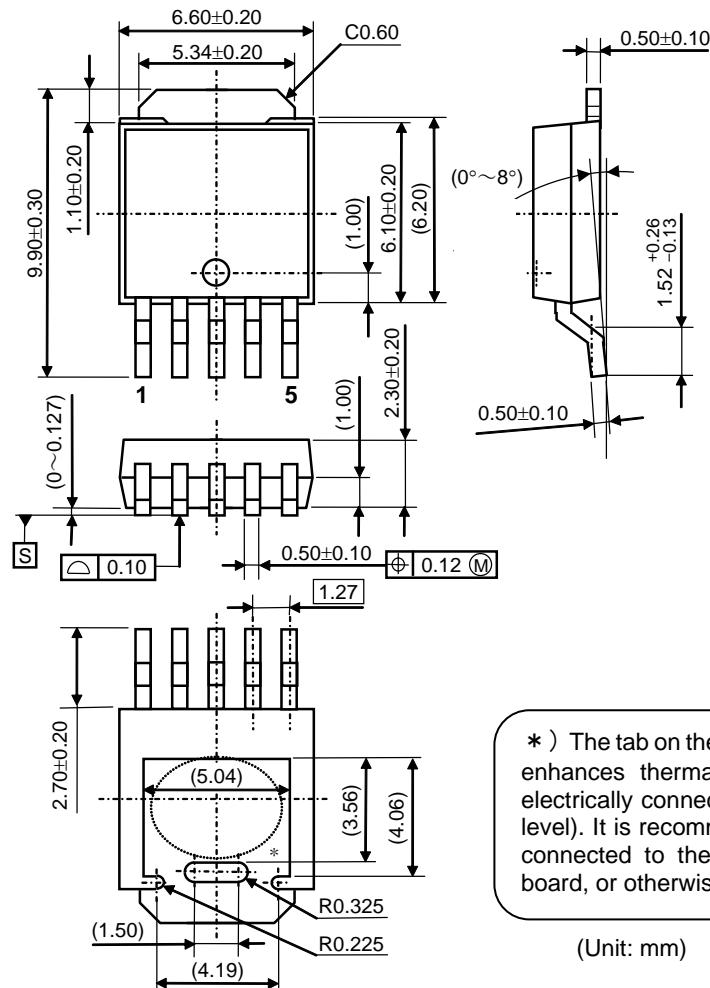

Power Dissipation vs. Ambience Temperature

Measurement Board Pattern

## Load Transient vs. Output Capacity (C2)

R8154 performs a stable operation by using 0.1  $\mu\text{F}$  of ceramic capacitor as the output capacitor. However, the variation of output voltage may not meet the demand of the system when input voltage and load current vary. In such cases, the variation of output voltage can be minimized significantly by using 10  $\mu\text{F}$  or higher ceramic capacitor. When using a high-capacity electrolytic capacitor for the output line, place the electrolytic capacitor a few centimeters apart from the IC after arranging the ceramic capacitor close to the IC.

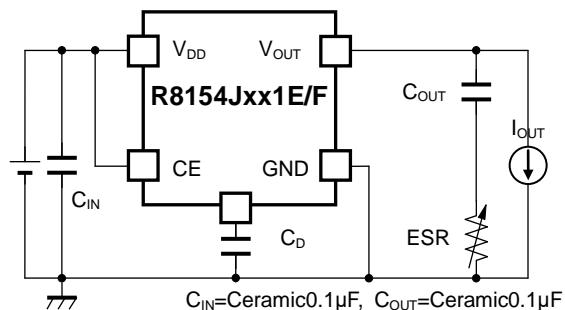

## ESR vs. Output Current

It is recommended that a ceramic type capacitor be used for this device. However, other types of capacitors having lower ESR can also be used. The relation between the output current ( $I_{OUT}$ ) and the ESR of output capacitor is shown below.

**R8154Jxx1E/F Test Circuit**

### Measurement conditions

Frequency Band: 10 Hz to 2 MHz

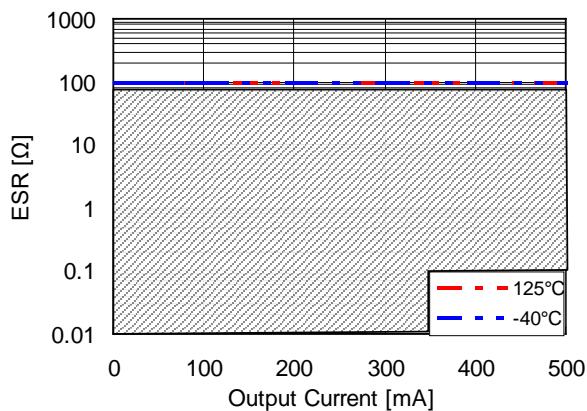

Measurement Temperature: -40°C to 125°C

Hatched area: Noise level is 40 μV (average) or below

Ceramic Capacitors: C1 = 0.1 μF, C2 = 0.1 μF

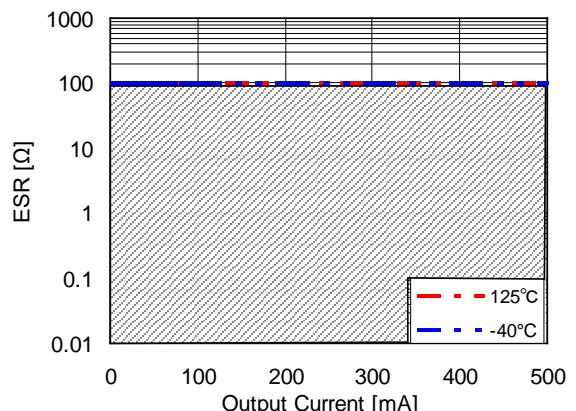

**R8154x25xx Output Current  $I_{OUT}$  vs. ESR**

Vin=2.5V to 36V

**R8154x85xx Output Current  $I_{OUT}$  vs. ESR**

Vin=8.5V to 36V

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to our sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of our company.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under our company's or any third party's intellectual property rights or any other rights.
5. The products in this document are designed for automotive applications. However, when using the products for automotive applications, please make sure to contact our sales representative in advance due to confirming the quality level.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
9. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used. In the case of recognizing the marking characteristic with AOI, please contact our sales or our distributor before attempting to use AOI.
11. Please contact our sales representatives should you have any questions or comments concerning the products or the technical information.
